FAT32 or exFAT? You can format your external hard drive in both – exFAT and FAT32.. The resulting FAT32 file system will

be compatible with all versions of Mac OS X, and Windows including back to 95.. Many still choose FAT32 over exFAT despite its slower performance, as it's also compatible with Linux Os and is supported on many consoles.. You can format your external hard drive from either the PC or Mac Just keep in mind if you want to use your drive also for OS X's Time Machine backups, we advise you to format your drive through Mac because there is an additional step to make drive compatible with "Time Machine Backups".
